

## Tick Killz Summary

Tick Killz is a liquid concentrate product that's **made with 100% organic ingredients**; it will kill ticks, mosquitoes, fleas and many other nuisance insects on contact **and** it will also provide on average 4 weeks of residual repellent benefit after each application. Tick Killz is Cedar Oil based because cedar oil is arguably the most widely recognized and accepted all natural insect repellent available. Tick Killz can be applied using anything from a backpack sprayer or hose end sprayer up to a large tank spray rig.

Tick Killz is recognized by the EPA as being 25b exempt, which means Tick Killz is **NOT** a registered chemical. As a result of the 100% organic ingredients and EPA 25b exemption status, Tick Killz has an outstanding safety profile; it's completely safe for use around kids, adults, and pets. Tick Killz will not harm the environment or the beneficial insects.

Tick Killz should be used on lawns, shrubs, mulch beds and any other areas where insects tend to dwell and breed. For best results, Tick applications should be done every 4-6 weeks. For mosquitoes, best results are achieved when Tick Killz is applied every 3-4 weeks. Allow Tick Killz to dry (approximately 45-60 minutes) before using the areas sprayed to insure maximum repellent benefit. Use Tick Killz to protect your family and loved ones from the potentially devastating effects of the viruses that can be carried by both ticks and mosquitoes.
